

# Varied Fluency

## Step 8: Volume of a Cuboid

### Teaching Note:

The formula for volume is  $l \times w \times h$  where  $l$  is horizontal,  $w$  is diagonal and  $h$  is vertical.

### National Curriculum Objectives:

Mathematics Year 6: (6M8a) [Calculate, estimate and compare volume of cubes and cuboids using standard units, including cubic centimetres \(cm<sup>3</sup>\) and cubic metres \(m<sup>3</sup>\), and extending to other units \[for example, mm<sup>3</sup> and km<sup>3</sup>\]](#)

Mathematics Year 6: (6M7c) [Recognise when it is possible to use formulae for the area of shapes](#)

### Differentiation:

**Developing** Questions to support calculating the volume of cuboids using  $l \times w \times h$  or area of base  $\times$  height. Same metric measures used within each question; multiples of 2, 3, 5 and 10 only.

**Expected** Questions to support calculating the volume of cuboids using  $l \times w \times h$  or area of base  $\times$  height. Some conversion between metric measures needed (mm to cm or cm to m). Same metric measures used within each question; whole unit measurements.

**Greater Depth** Questions to support calculating the volume of cuboids using  $l \times w \times h$  or area of base  $\times$  height. Some conversions between metric measures needed (mm to m or m to mm); some measurements with 1 decimal place used.
